EDUCATION

Indian Institute of Information Technology Kota (IIIT Kota)

Rajasthan, India

Bachelor of Technology (B.Tech) – Electronics and Communication Engineering (ECE)

Expected June 2029

- **Academic Standings:** Maintained a current cumulative grade point average of **8.51 / 10.00**.
- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Discrete Mathematics, Digital Electronics, Circuit Analysis, Semiconductor Physics.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, JavaScript, SQL, HTML5, CSS3

Tools & Frameworks: Node.js, React, Git, GitHub, Firebase, Chart.js, Canva, Wix, Framer

Hardware & Domains: Arduino Uno, Embedded Systems, UI/UX Design, Competitive Programming, Agile Methodology

TECHNICAL PROJECTS

Kavach – Offline Emergency SOS System

Java, JavaScript, HTML, CSS, Firebase

- **Designed** and engineered a decentralized disaster response application that successfully routes critical local emergency alerts to medical and fire departments without requiring active internet connectivity.
- **Developed** a peer-to-peer neighborhood verification protocol for multi-tier localized authentication, sustaining a 100% security accuracy rate across test environments.
- **Programmed** an automated hardware signaling subsystem with integrated high-decibel alert sirens and synchronized lighting grids to map exact regional disaster coordinates, optimizing rescue deployment speed down to under 10 minutes.

GenZ-Expense Calculator

JavaScript, HTML5, CSS3, Chart.js

- **Built** a fully responsive financial analytics application using Chart.js to produce dynamic data-driven visualizations, categorizing monthly personal expenditure cycles across custom data fields.
- **Engineered** a localized retention framework that tracks and caches recurring restaurant and cafe visit records, successfully shrinking interface navigation friction by **40%** for repeat consumer transactions.
- **Achieved** an end-to-end mathematical calculation precision rate of **95%** during structured beta-testing phases executed over multi-user simulation baselines.

PROFESSIONAL EXPERIENCE

InAmigo Foundations

Remote

Web Development Intern

December 2025 – February 2026

- **Developed** scalable, cross-browser compliant user interface modules using modular JavaScript, which successfully decreased application landing page load times by **18%** [verify this].
- **Fixed** critical multi-browser rendering and layout responsiveness inconsistencies across production environments, driving an estimated **15%** [verify this] rise in initial web user retention rates.
- **Collaborated** within an agile engineering squad utilizing structured Git workflows and asynchronous pull-request reviews to coordinate weekly code integration pipelines.

COMPETITIVE PROGRAMMING & ACHIEVEMENTS

- **LeetCode Data Structures & Algorithms:** Completed over 100+ foundational algorithmic challenges covering arrays, linked lists, and trees; actively participating in weekly global optimization contests.
- **CodeChef Competitive Programming:** Solving complex optimization problems, building efficient low-complexity code structures under rigorous computational and execution runtime parameters.

- **Hack-O-Vation 2026 Finalist:** Outperformed competing teams to be named a shortlisted national finalist in a 36-hour hackathon, presenting a working tech prototype addressing disaster management infrastructures.

LEADERSHIP & CERTIFICATIONS

- **Google Developer Groups (GDG) IIIT Kota Chapter – Core Member:** Executed technical workshop sessions, steering cloud ecosystem orientations and continuous development environments for upcoming batches.
- **Technical Certifications:** Formally achieved 5 distinct industry-aligned technical credentials through Google Cloud, including the *Google Cloud Computing Foundations* and *Android Developer Fundamentals* pathways.
